- Modular technology for a fast white-label implementation and short time to market
- Source code licensing options
- Multi-language support
- Adaptation to regional requirements

dxTrade Mobile is a native multi-asset trading application for iOS and Android that provides a top-quality user experience based on the following 6 pillars of excellence:

SUPERIOR PERFORMANCE

dxTrade Mobile boasts its exclusive proprietary connectivity protocol, which allows your platform to always stay connected on any mobile/WiFi network and when switching between them.

Both iOS and Android versions of dxTrade Mobile are native applications, providing the best user experience due to our expertly designed user interfaces specific for mobile platforms.

AWARD-WINNING DESIGN

dxTrade Mobile user interface is highly intuitive, making it the best option for the easy onboarding of new traders. An enhanced user experience caters to traders, supporting them throughout the whole trading process. Continuous user behaviour research allows dxTrade Mobile to provide a better trading experience to traders.

EMBEDDED ONBOARDING

dxTrade Mobile onboarding tools include registration of new users, integration with KYC service providers, and AML. It also has a LiveChat and tutorials for new traders.

SHORT TIME TO MARKET

The quick implementation is guaranteed by the modular technology of the application.

SEAMLESS INTEGRATION

- Integration with dxTrade OMS or any third-party platform via APIs and bridges.
- Integration with broker's CRM, customer portal, and sales funnel
- Scalable backend

Compared to its competitors, dxTrade Mobile proprietary binary protocol significantly speeds up data handling of quotes delivery, providing fast load and frequent UI updates.
