

Trading platform for CFD brokers

contents

[benefits](#) → [features](#) → [about us](#)

Devexperts has been developing software for the capital markets since 2002. The company's core expertise are multi-asset trading platforms, matching engines, and exchange solutions.

Devexperts flagship product is DXtrade.

DXtrade CFD and Crypto is a SaaS platform for brokers working in the FX, CFD, and crypto retail markets, and for prop trading firms.

benefits
for brokers
and traders

Personalized Layouts

With DXtrade, brokers are free to create predefined layouts for their clients. Traders can also set up and save personalized layouts for future use.

Space Optimization

- Public watchlists, configured by the broker and representing either static sets of top-rated instruments; popular indices from market data providers (DOW 30, S&P100, etc)
- The platform also supports seamless watchlist syncing between web and mobile interfaces
- Traders can link any watchlist with a chart or news widget to quickly switch the context of the workspace from one instrument to another

The screenshot displays the DXtrade trading platform interface. The main workspace is titled 'Workspace 1' and contains several floating windows:

- Watchlist:** A list of instruments including AAPL, TSLA, and EUR/USD.
- Charts:** A technical analysis chart for AAPL showing price movement and volume.
- Orders:** A table of open orders with columns for Order ID, Date and Time, Symbol, and Status.
- Positions:** A table of current positions with columns for Symbol, Side, Size, and P&L.

The background interface includes a navigation bar with tabs for Chart, Positions, Watchlist, My Account, and Tools. The main workspace also features a top navigation bar with options like 'My Trading Account', 'Trading Dashboard', 'Trading Journal', 'Technical Analysis', 'Economic Calendar', and 'Workspace 2'. A mouse cursor is visible over the Positions window.

benefits

01

02

Charts

- 100+ technical indicators, unlimited number of custom indicators with the integrated script language
- A wide selection of drawings and chart types
- Trade-from-the-chart functionality
- Support for an unlimited number of chart widgets in the same workspace

Connectivity & Integration

- REST/WebSockets API for trading, market data subscription, administrative and reporting tasks
- FIX API for integrations with liquidity providers, prime brokers, KYC/AML, market data vendors, and third party platforms

Risk Control for Brokers

- Optimizes and automates routine risk management operations
- Allows brokers to have complete control of the system directly from the dealing UI

03

04

05

Spot and Margin Crypto Trading

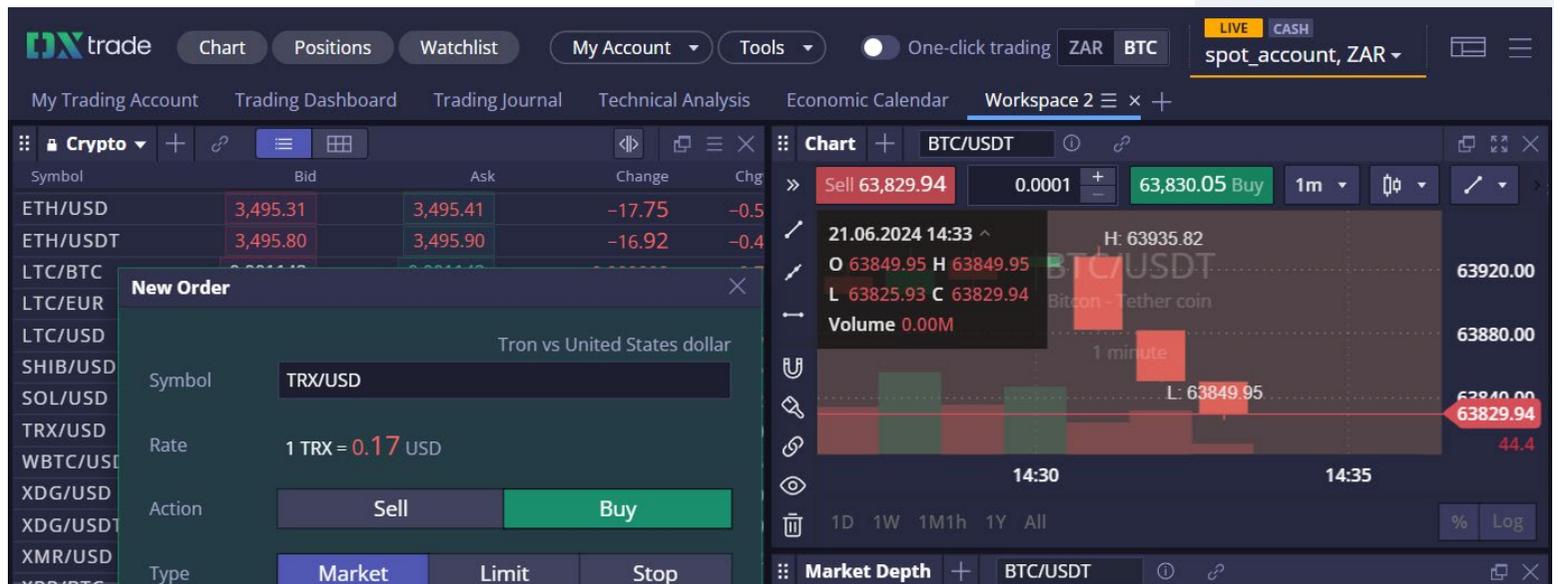

06

The system provides internalization and external hedging for crypto liquidity.

A/B Book Strategies

07

- Allows brokers to configure A/B-book and mixed execution models
- Execution strategies fine-tuning by setting up profitability and slippage parameters to better hedge risks and maximize returns
- Execution strategies can be assigned per account, per instrument, and per account group, as well as chose by meeting specific trading limits

Multi Crypto Custodian Support

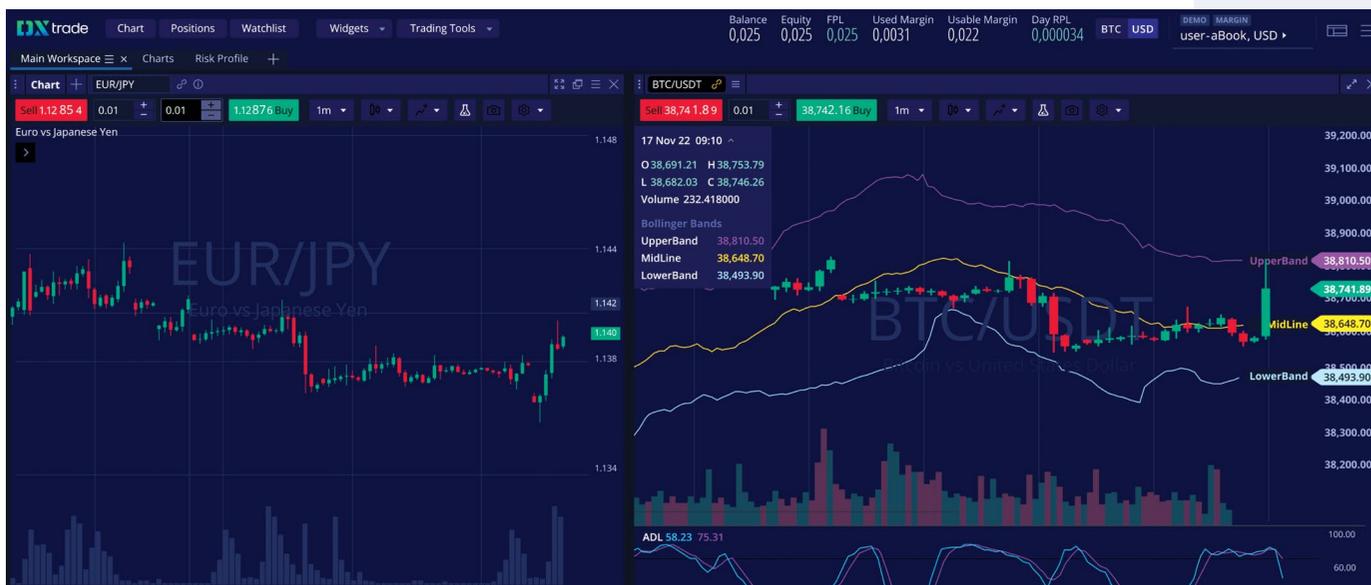

Connectivity to multiple crypto custodians to ensure that the platform supports an extensive range of altcoins and stablecoins and accepts transactions from different blockchain types.

08

Prop Trading

- Trading Dashboard: Web trading widget that helps prop broker clients analyze their performance
- Prop trading risk management: Maximum Drawdown and Profit Target settings automatically close all positions on client accounts losing or winning more than a predefined percentage of their initial balance.
- Paper trading environment: Full-fledged trading simulator for launching trading contests

09

benefits

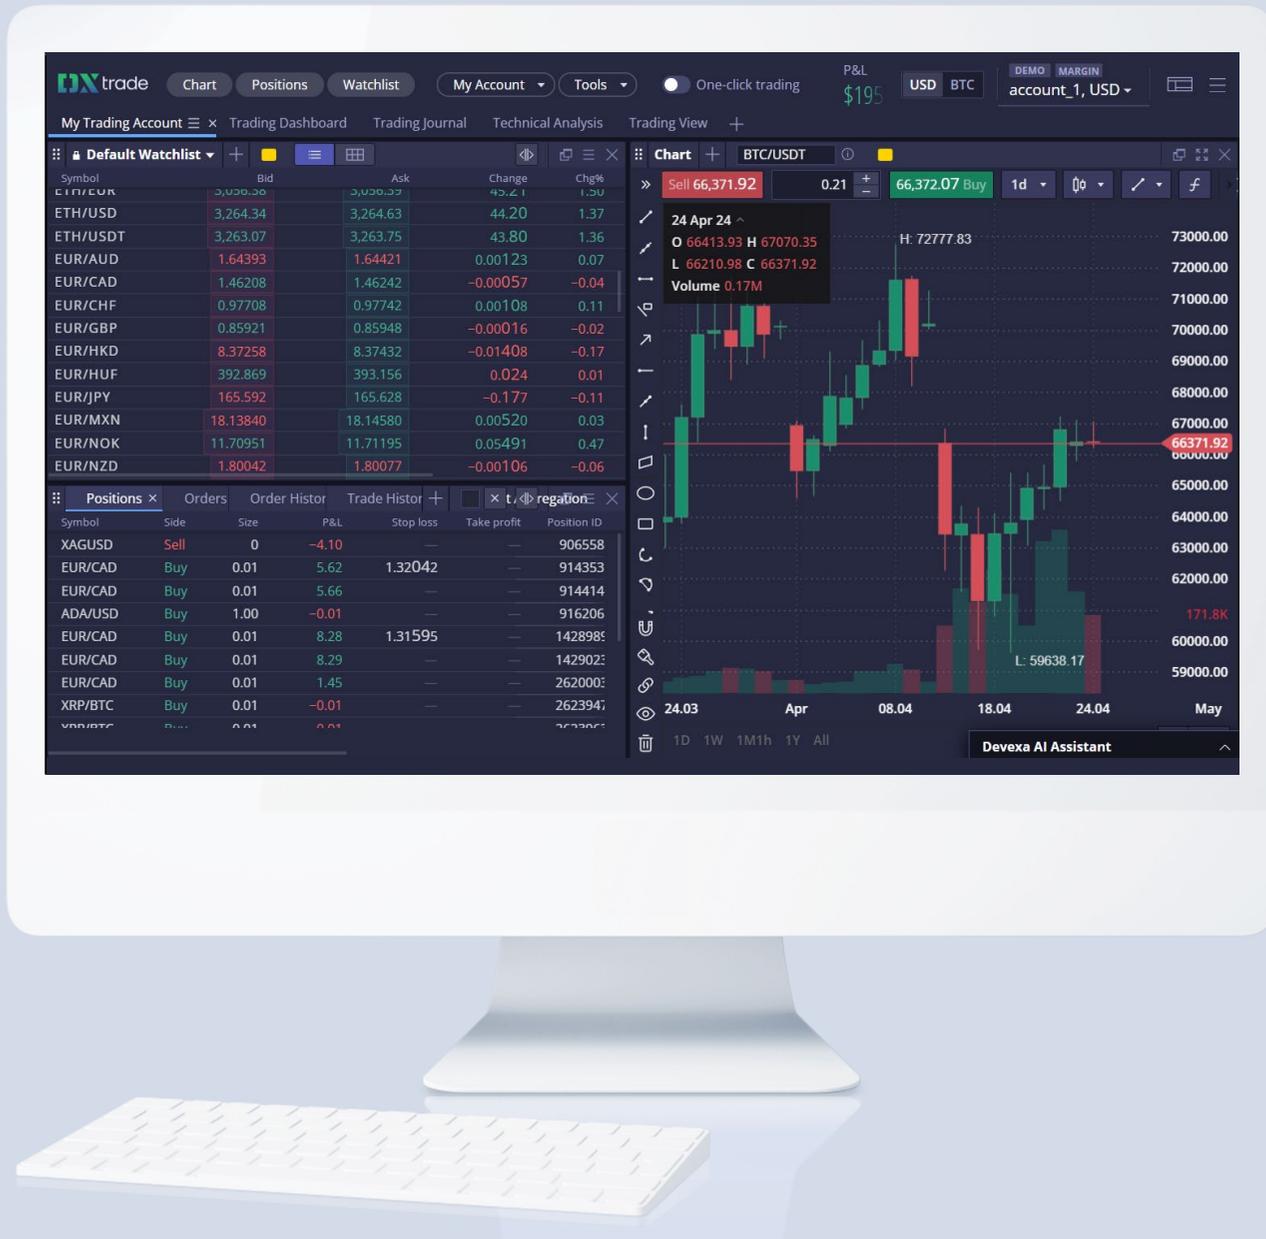

stand out
with unique
features

Web Trader

01

A web-based trading platform accessible to traders of any experience level and configurable by both traders and brokers.

WT features

Trading Dashboard

- Allows traders to analyze their performance and trading behavior on an instrument, asset class, or account level
- Available metrics include intraday performance, risk/reward ratios, win rates, and winning/losing trade holding times

1.1

Watchlists & Widget Linking

- Watchlists accessible to traders of all experience levels
- Support list view/tile view switching
- Quick buttons for applying pre-configured Stop Loss or Take Profit in the one-click trading mode
- Watchlists can be linked to a chart or news widget to quickly switch the context of the workspace from one instrument to another, just selecting it in the watchlist

1.2

Trading Journal

- Built into the platform to replace legacy spreadsheets
- Automatically logs all user's trades and positions and allows them to add notes or tags
- Trades can be filtered by tags, time frame, instrument, or asset type

Risk Management for Traders

- Traders can achieve their desired risk-reward ratios by pre-configuring Stop Loss/Take Profit levels
- Stop Loss/Take Profit levels can be set up per instrument or factoring in the percentage of balance at risk when entering trades

1.3

1.4

The screenshot shows the OXtrade trading platform interface. The main window is titled "New Order" and is for the BTC/USD pair. The order type is "Market" with a quantity of 1.50 lots. The current price (ask) is 37,082.0. The side is set to "Buy", and the margin impact is 2,781.29 USD. The protection orders section is checked, showing a Stop Loss at 37,081.4 and a Take Profit at 37,085.6. The projected loss is 0.90 and the percentage of balance at risk is 0.00. The background shows a candlestick chart for BTC/USD and a list of other trading pairs on the left.

Crypto Widgets

1.5

Market Depth

- Highlights the value of bid/ask quotes
- Helps traders see how many open orders for a given instrument are there in the market in real-time

Time & Sales

- Displays detailed data on selected instruments including time, price, and volume of each transaction with the instrument over the day

DXtrade Mobile

02

A full-fledged mobile solution for on-the-go trading with real-time portfolio monitoring, market data streaming, charting tools, risk management, and notifications.

WT features

Native Charting Library

- Optimized for mobile device screens
- Support 90+ indicators and multiple charting types
- Trader's orders and positions are displayed on the chart

Multiple Order Types

- Market, stop, limit, and OCO orders
- Stop Loss/Take Profit can be applied to any position or pending order

Watchlists

- Mobile-optimized watchlists
- Mini-chart for tile view
- Synchronized with Web Trader

2.1

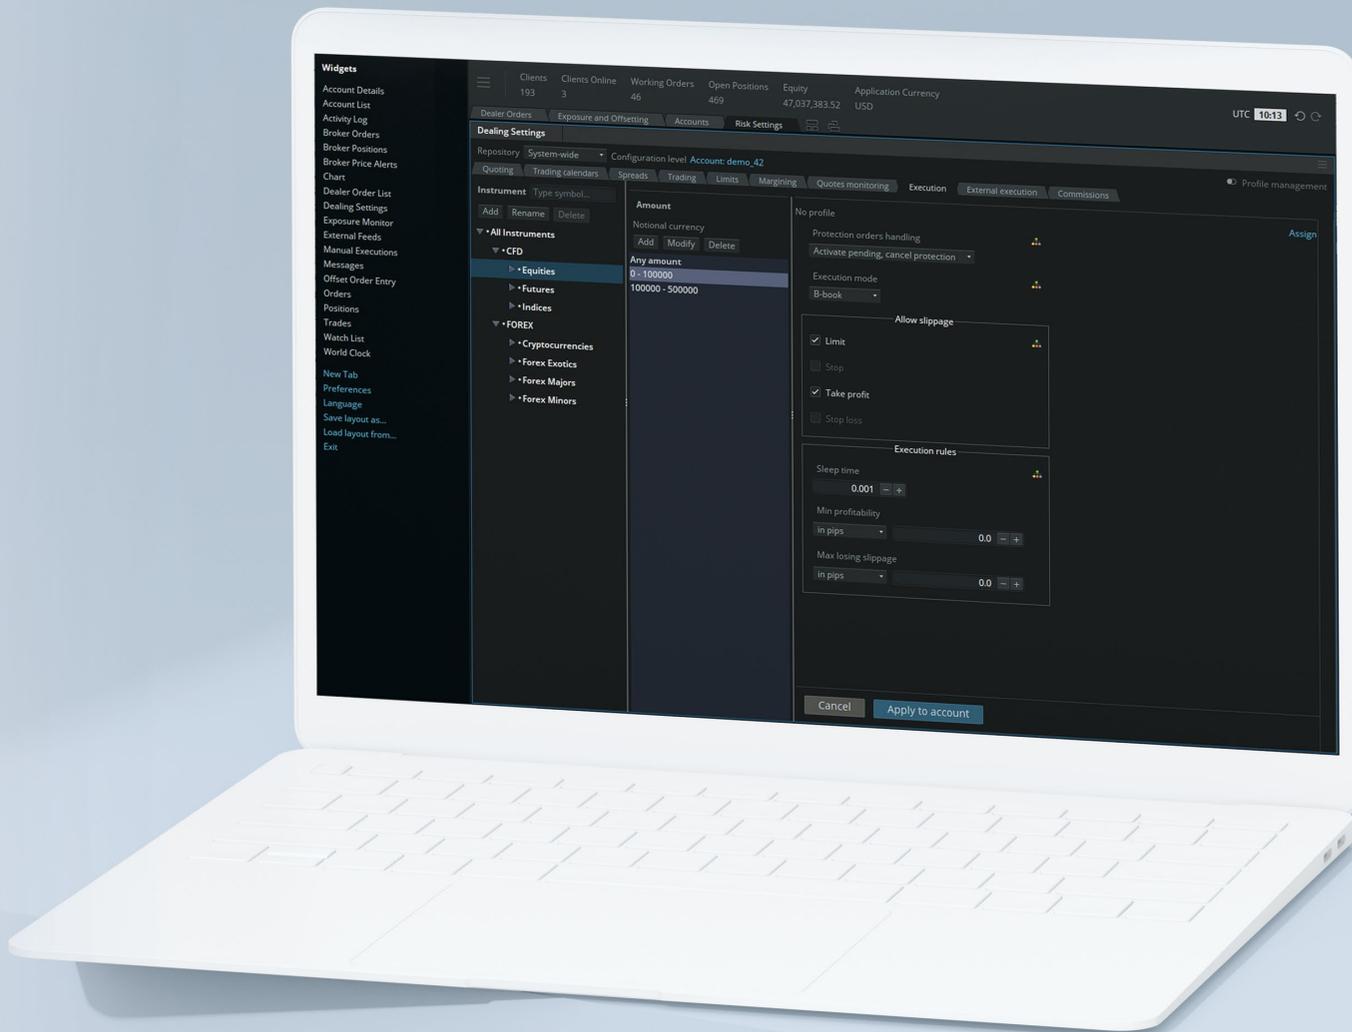

2.2

2.3

Risk Management

A widget-based desktop application that allows brokers to hedge risks and fine-tune execution settings.

Real-Time Exposure Monitor

- Allows brokers to monitor A/B-book and hedged exposure in real time
- Brokers are free to hedge directly from Exposure Monitor while maintaining an up-to-date view on their Risk and P/L
- Exposures and P/L can be filtered per account, group, instruments, or asset type

Widgets

- Account Details
- Account List
- Activity Log
- Broker Orders
- Broker Positions
- Broker Price Alerts
- Chart
- Dealer Order List
- Dealing Settings
- Exposure Monitor
- External Feeds
- Manual Executions

Configurable Pricing

- Brokers can create individual profiles with different markups per instrument, group, or account
- The pricing mechanism allows adding fixed markups or markup percentages to the price streams visible to traders
- Smart pricing technology supports min/max spreads, advanced price filters, and pricing failovers

Account Management and Monitoring

- All widgets can be opened in the same workspace to monitor multiple accounts, groups, or metrics in real time
- Brokers are free to create custom tags and flag high-volume or abusive traders and filter accounts by these tags from every widget

A white circle containing the number 3.2 in a blue outline font.

3.2

A white circle containing the number 3.3 in a blue outline font.

3.3

On-Behalf Trading and Management

- Brokers can trade on behalf of their clients, place pending orders and market orders at the current market rates, or fill orders at a specific price
- On-behalf trading is supported in the Account Details, Positions, and Orders widgets

3.4

Setting Up Groups & Profiles

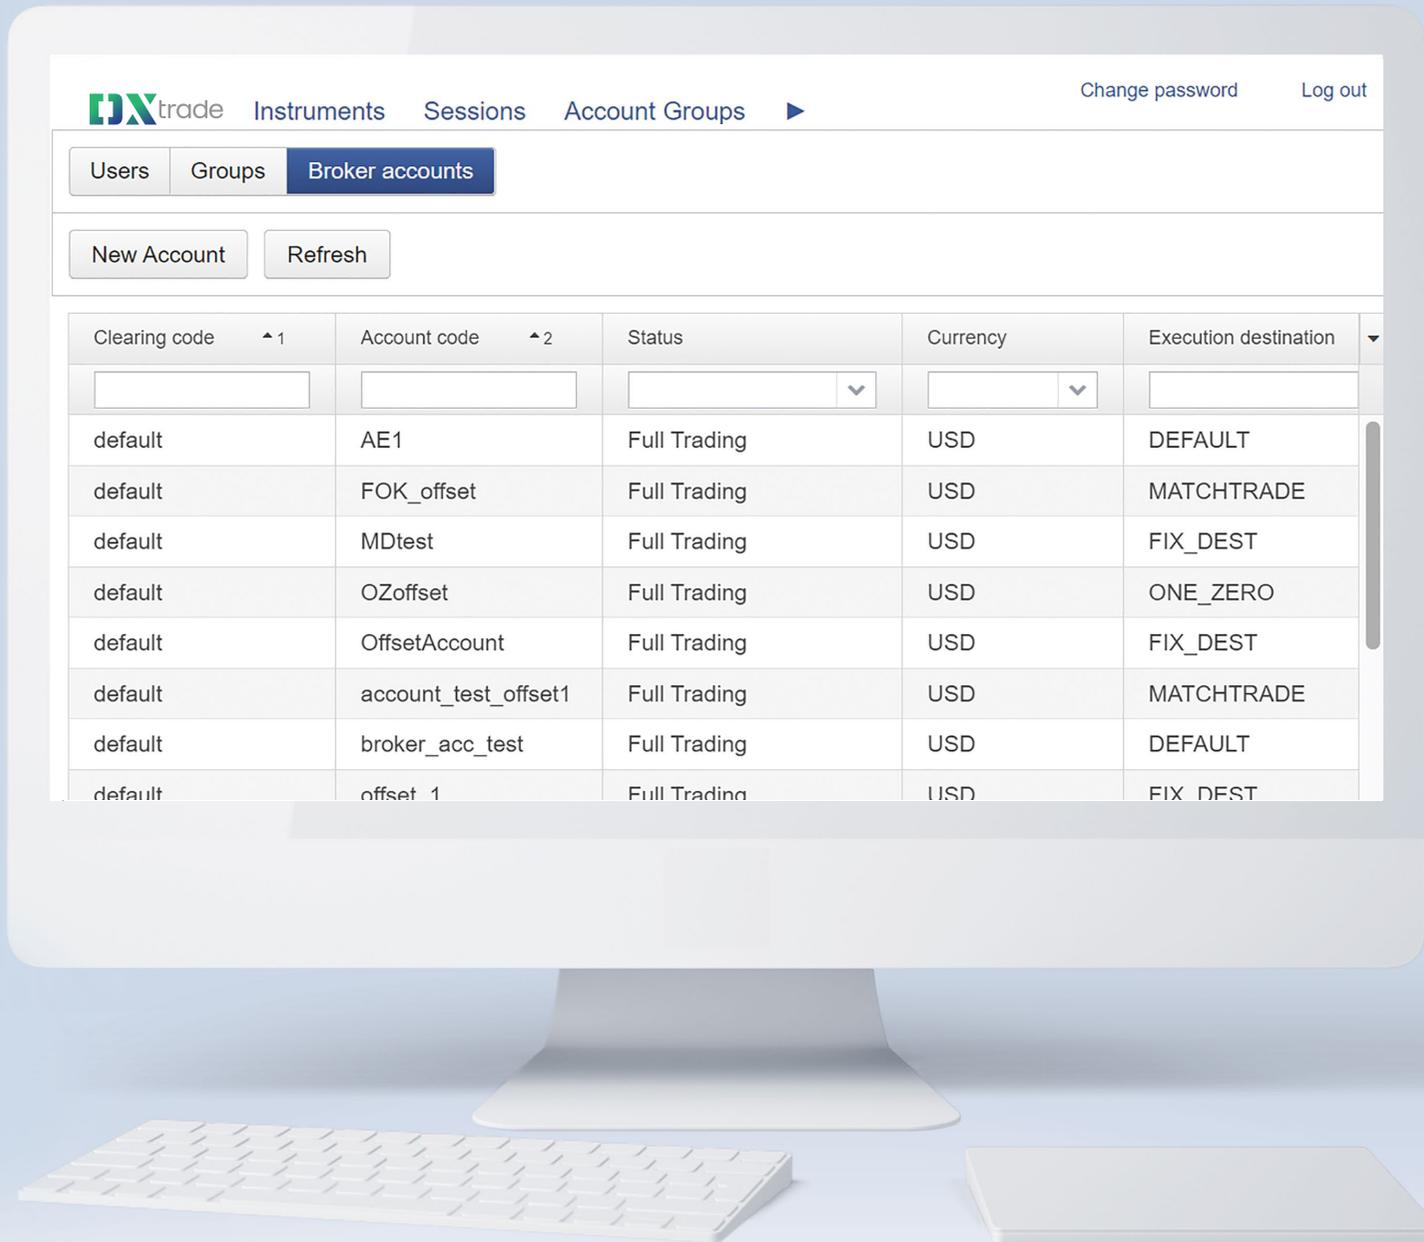

- Tiered or flat margins
- Trade size limits
- Trade and overall exposure limits
- Trading modes (full/close-only/disabled) – can be applied in bulk to multiple clients

3.5

Back-Office

A web-based UI to manage daily brokerage operations.

WT features

Swaps and Swap-Free Accounts

- Brokers can apply overnight financing charges with swap rates or interest rates configurable by group and instrument
- Markups can be applied directly from the UI for each instrument or group of instruments
- Swap multipliers can be applied to each instrument
- Brokers can also apply swap-free profiles to instruments, groups, or accounts based on regional norms and legislation

Cash Transfers for Balance Adjustments

- A quick way to correct the balance on an account without resorting to back-end modifications or having to perform a trade
- All cash transfers are tracked and viewable in the management console or in the Account Statement

4.1

4.2

Client Rebates

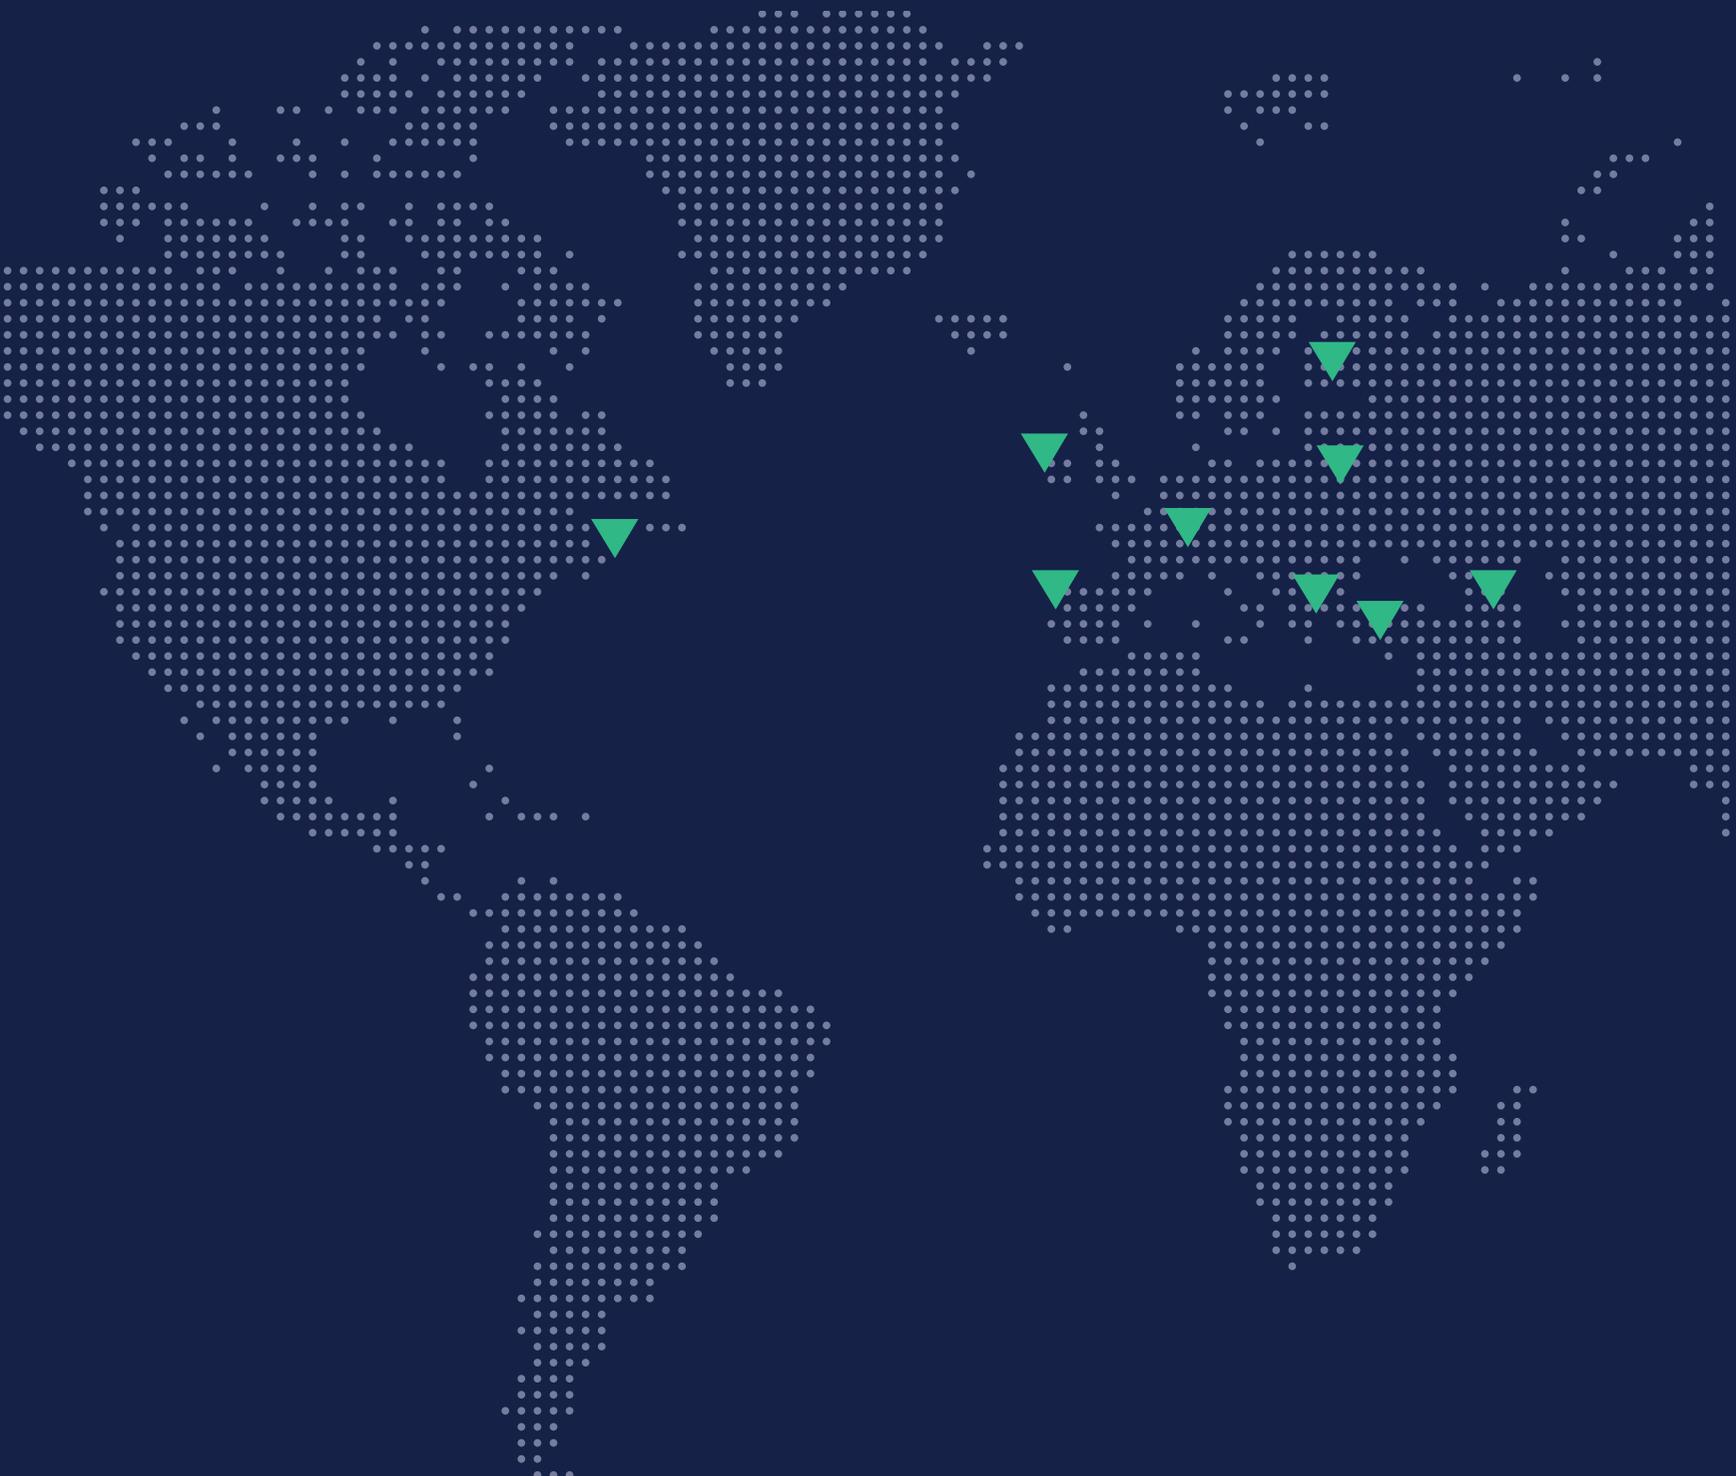

- Rebates enable brokers to attract and reward introducing brokers or traders with a share of their own revenue
- Brokers are free to create custom rebate plans based on tiered volume traded per asset class
- Rebates can be configured on a weekly, bi-weekly and monthly basis, on a group or an account level

Commission Plans

- Brokers can set commission plans based on percentage volume, flat rates, basis points, or combinations of each
- Each commission plan can be applied per instrument, group, or account
